PROFESSIONAL SUMMARY

Driven and detail-oriented backend developer with a strong foundation in Java, Spring Framework, and relational databases. Proficient in designing and developing robust server-side applications with a focus on performance and scalability. Passionate about clean code, continuous learning, and contributing to impactful software solutions.

EDUCATION

Manipal University Jaipur | Bachelor of Science in Computer and Communication Engineering
Graduation Date: 2026

SKILLS

- **Programming Languages** : Java, Sql
- **Backend** : Spring, Spring Boot, Spring Data Jpa
- **Frontend** : Html,Css
- **ORM Tools** : Hibernate
- **Database** : MySQL
- **Version Control** : Git, Github
- **Testing** : Postman

PROJECTS

Student Mentor Portal

Tech Stack: Spring Boot, Hibernate, Spring Data JPA, MySQL

- Developed a role-based academic portal streamlining interactions between students, faculty & HOD.
- Designed and implemented backend architecture with secure login and role-specific functionalities.
- Enabled faculty to manage mentees, students to submit mentor forms, and HOD to create and assign mentors.
- Increased mentor allocation efficiency by **50%** through automation & improved data management.
- Boosted student participation in mentorship programs by **40%** with a simplified & accessible interface.
- Ensured **100% data integrity** using Hibernate & Spring Data JPA with well-structured relational mappings.
- Followed clean code practices & modular arch. to support scalability & future enhancements.

Books Management

- Designed and implemented a backend system using **Spring Boot** to enable CRUD operations on books.
- Integrated functionality to upload and download images related to books, ensuring secure storage and efficient retrieval.
- Utilized **Spring Data JPA** for database operations and implemented a **MySQL** database for persistent storage.
- Developed **RESTful APIs** and used **ResponseEntity** to ensure correct HTTP responses and improve API communication.
- Followed best practices for backend development, including input validation, error handling, and optimized API response times.
